### 10.5.7 Ficheros de configuración

A continuación se incluyen los ficheros necesarios para la configuración de nuestra aplicación.

#### 10.5.7.1 Configuración de contexto, fuentes de datos y pool de conexiones

##### META-INF/context.xml

```
<?xml version="1.0" encoding="UTF-8"?>

<Context path="/Apps">

<Logger className="org.apache.catalina.logger.FileLogger"
prefix="Apps." suffix=".log" timestamp="true"/>

<!-- <Resource auth="Container" name="jdbc/ApplicationDataSource"
type="javax.sql.DataSource"/> -->

<!-- JNDI Datasource configuration. -->

<!-- JNDI name. -->
<ResourceParams name="jdbc/ApplicationDataSource">

<!-- JDBC connection url for connecting MySQL dB. -->
<parameter>
<name>url</name>
<value>jdbc:mysql://localhost:3306/apps</value>
</parameter>

<!-- Class name for JDBC driver. -->
<parameter>
<name>driverClassName</name>
<value>com.mysql.jdbc.Driver</value>
</parameter>

<!-- MySQL username connections. -->
<parameter>
<name>username</name>
<value>userapps</value>
</parameter>

<!-- MySQL password for connections. -->
<parameter>
<name>password</name>
```

---

```
<value>userapps</value>
</parameter>

<!-- Using connection pooling. -->
<parameter>
<name>factory</name>
<value>org.apache.commons.dbcp.BasicDataSourceFactory</value>
</parameter>

<!-- Maximum number of connections in pool. 0 for no limit. -->
<parameter>
<name>maxActive</name>
<value>100</value>
</parameter>

<!-- Maximum number of idle connections in pool. 0 for no limit. -->
<parameter>
<name>maxIdle</name>
<value>30</value>
</parameter>

<!-- Maximum time to wait for a connection to become available in ms.
An Exception is thrown if this timeout is exceeded. -1 to wait
indefinitely. -->
<parameter>
<name>maxWait</name>
<value>10000</value>
</parameter>

<!-- If true, abandoned connections are removed. Else abandoned
connections are recoved. -->
<parameter>
<name>removeAbandoned</name>
<value>true</value>
</parameter>

<!-- Number of seconds a connection has been idle before it is
considered abandoned. Default: 300. -->
<parameter>
<name>removeAbandonedTimeout</name>
<value>300</value>
</parameter>

<!-- If true you want DBCP to log a stack trace of the code which
abandoned the connection resources.Default: false -->
<parameter>
<name>logAbandoned</name>
<value>true</value>
</parameter>

</ResourceParams>

</Context>
```

### **WEB-INF/Struts/validator-rules.xml**

```
<?xml version="1.0" encoding="ISO-8859-1"?>

<!DOCTYPE form-validation PUBLIC
    "-//Apache Software Foundation//DTD Commons Validator Rules
    Configuration 1.1.3//EN"
    "http://jakarta.apache.org/commons/dtds/validator_1_1_3.dtd">
<!--
    $Id: validator-rules.xml 159291 2005-03-28 20:19:29Z niallp $

    This file contains the default Struts Validator pluggable validator
    definitions. It should be placed somewhere under /WEB-INF and
    referenced in the struts-config.xml under the plug-in element
    for the ValidatorPlugIn.

    <plug-in
        className="org.apache.struts.validator.ValidatorPlugIn">
        <set-property property="pathnames" value="/WEB-INF/validator-
        rules.xml, /WEB-INF/validation.xml"/>
    </plug-in>

    These are the default error messages associated with
    each validator defined in this file. They should be
    added to your projects ApplicationResources.properties
    file or you can associate new ones by modifying the
    pluggable validators msg attributes in this file.

    # Struts Validator Error Messages
    errors.required={0} is required.
    errors.minlength={0} can not be less than {1} characters.
    errors.maxlength={0} can not be greater than {1} characters.
    errors.invalid={0} is invalid.
```

```
errors.byte={0} must be a byte.  
errors.short={0} must be a short.  
errors.integer={0} must be an integer.  
errors.long={0} must be a long.  
errors.float={0} must be a float.  
errors.double={0} must be a double.
```

```
errors.date={0} is not a date.  
errors.range={0} is not in the range {1} through {2}.  
errors.creditcard={0} is an invalid credit card number.  
errors.email={0} is an invalid e-mail address.
```

Note: Starting in Struts 1.2.0 the default javascript definitions have been consolidated to commons-validator. The default can be overridden by supplying a <javascript> element with a CDATA section, just as in struts 1.1.

#### *10.5.8.2 Modificación de la capa controlador existente para la inclusión del servicio de notificación de tramitación de solicitud de vacaciones y la realización de operaciones vía SMS*

Se observa que para la extensión para el servicio de SMS no es, en absoluto, necesaria la modificación del modelo. Además de los ficheros de configuración, sólo puede ser necesaria la modificación de algunas acciones de Struts para la inclusión de servicios de notificación. El resto de elementos son elementos nuevos que se aportan para completar el servicio.

Esto muestra la escalabilidad de la aplicación.

##### *10.5.8.2.a Capa controlador*

###### 10.5.8.2.a.1 application.http.controller.actions.holidaysservice

Se modifica la acción de tramitación de vacaciones para la creación de los mensajes a enviar con la notificación.

**MapUpdatesHolidaysRequestAction**
